## Professional Summary

Computer Science Graduate from PES University (2026), specializing in Machine Intelligence and Data Science. Hands-on experience building production-grade AI systems across three internships, including RAG pipelines, LLM fine-tuning, semantic search, and full-stack development. Proficient in Python, FastAPI, LangChain, React, and cloud-native tools including AWS and Docker. Passionate about applying Generative AI and data-driven solutions to real-world engineering challenges.

## Professional Experience

### Covalense Digital - AI/ML Intern (Jan 2026 - May 2026)

#### RFP Clarification / Bid Assist System

- Built a RAG-based pipeline using LLMs and semantic search to automatically extract technical and functional requirements from enterprise-scale RFP documents, reducing manual review effort significantly.
- Integrated ChromaDB vector database retrieval with a FastAPI backend to generate structured clarification reports, enabling pre-sales teams to respond to bids faster.
- Developed secure REST APIs for PDF ingestion, query processing, and downloadable report generation using FastAPI and JavaScript.

#### Resume Matcher

- Engineered an automated resume-job matching system using hybrid retrieval (BM25 + vector embeddings) and cross-encoder reranking, improving matching precision over baseline keyword search.
- Built a full-stack application with React.js frontend and FastAPI backend, processing resumes in multiple formats (PDF, DOCX) and extracting structured candidate metadata.
- Used ChromaDB as the vector store; implemented RAG to provide contextual candidate evaluations for HR workflows.

### Clover Bay Technologies - Software Engineer Intern (June 2025 - Aug 2025)

- Developed an interactive timesheet management dashboard using Python Dash and SQL Server, enabling project and delivery managers to track resource allocation across teams in real time.

- Containerized the application using Docker, ensuring consistent deployment across environments.

### **Falabella India - Software Engineer Intern (June 2024 - July 2024)**

- Built an AI-powered customer-facing chatbot using Vertex AI and the OpenAI API, capable of understanding and responding to natural language queries based on a structured product dataset.
- Implemented the solution using Python and SQL for data handling, with GenAI integration for response generation.

## **Education**

PES University - B.Tech in Computer Science & Engineering - CGPA: 7.8    2022 – 2026  
BASE PU College, State Board - 94.3%    2020 – 2022  
Clarence Public School, ICSE Board - 91.4%    2008 – 2020

## **Technical Skills**

- **Programming Languages:** Python, Java, R, JavaScript, JSON, GoLang, SQL, C, Data Structures & Algorithms
- **Web Development:** Flask, React, Node.js, HTML, CSS, Spring Boot, FastAPI
- **Databases:** MySQL, MongoDB, ChromaDB, Postgres
- **Cloud & DevOps:** AWS, Docker, Kubernetes
- **Data Analytics & Visualization:** Pandas, NumPy, Plotly, Dash, Streamlit, MATLAB
- **Machine Learning & AI:** PyTorch, TensorFlow, Generative AI, CNN, RNN, LangChain, Huggingface, VertexAI, YOLO, RAG, Vector Embeddings, Fine-tuning
- **Big Data & Distributed Systems:** Hadoop, Apache Kafka
- **Tools & Platforms:** Jupyter Notebook, VS Code, Anaconda/Conda, VMWare, Tableau, Git, GitHub Copilot, Cursor AI, Claude Sonnet 4.6, GitBash, pgAdmin, OLLAMA

## **Certifications**

- Claude 101 Certificate
- Introduction to Model Context Protocol (MCP)
- Model Context Protocol: Advanced Topics
- AWS Cloud Practitioner
- Cybersecurity Foundations
- Data Analytics Foundations

## Projects

### Patent Explorer | React, Java, Spring Boot, SQLite, Python, Pandas

- Built an end-to-end patent search platform, processing 150,000+ patent records from raw CSVs into a structured SQLite database using Python and Pandas.
- Developed a RESTful API in Java and Spring Boot supporting dynamic, case-insensitive full-text search across the patent database.
- Designed a React frontend with client-side pagination, enabling fast and responsive patent discovery.

### Nutritionist Chatbot | Python, LLaMA, HuggingFace, NLP

- Fine-tuned a LLaMA-based LLM on a nutritional dataset, building a domain-specific chatbot for personalized dietary guidance.
- Evaluated model performance using accuracy and F1-score metrics; applied POS tagging and word embedding visualization to analyze linguistic quality of outputs.

### Mango Detection using YOLO | Python, YOLOv5, YOLOv8

- Trained YOLOv5 and YOLOv8 object detection models to identify and classify mangoes in agricultural field images, optimizing precision and recall across model variants.
- Designed the system for real-world deployment in automated harvesting and yield estimation workflows.
